DEFINE

Monsoons are characterized by a seasonal reversal of wind direction, typically associated with heavy rainfall and distinct wet and dry seasons.

Person 1

Invest in advanced meteorological technologies and forecasting systems to provide timely and accurate information about monsoon patterns and extreme weather events.

Develop drought resistant crop varieties and promote crop diversification.

Educate communities on flood safety measures and evacuation procedures.

PROBLEM

Impact of Monsoons.

Person 2

afforestation and reforestation efforts.

Raise awareness
among the general
population about
monsoons,their
impacts,and how to
prepare for and
respond to extreme
monsoonal events.

Encourage the construction of climate resilient housing and infrastructure to withstand extreme weather events.

What we need to do?

Farly Warning System

Protect and restore natural

Invest in research and innovation to better understand monsoons, predict
